

① Develop a Java program that prints all real solⁿ to the quadratic eqⁿ $ax^2+bx+c=0$. Read in a, b, c and use the quadratic formula.

```
import java.util.Scanner;
```

```
class Quadratic
```

```
{
```

```
    int a, b, c;
```

```
    double r1, r2, d;
```

```
    void getd()
```

```
    {
```

```
        Scanner s = new Scanner(System.in);
```

```
        System.out.println("Enter the coefficients of  
a, b, c");
```

```
        a = s.nextInt();
```

```
        b = s.nextInt();
```

```
        c = s.nextInt();
```

```
    }
```

```
    void compute()
```

```
    {
```

```
        while (a == 0)
```

```
        {
```

```
            System.out.println("Not a quadratic equation");
```

```
            System.out.println("Enter a non zero value  
for a:");
```

```
            Scanner s = new Scanner(System.in);
```

```
            a = s.nextInt();
```

```
        }
```

```
        d = b*b - 4*a*c;
```

```
        if (d == 0)
```

```
        {
```

```
            r1 = (-b)/(2*a);
```

```
            System.out.println("Roots are real and equal");
```

```
            System.out.println("Root1 = Root2 = " + r1);
```

```
        }
```
